

NPK EXPERT INT.

INTRO

It's a concentrated humic, fulvic and amino acid product for easier and quicker nutrient absorption (NPK, macro and microelements) from the soil to the roots of the plant as well as for better water accumulation. In watering solutions, SANASOIL allows absorption of

absorption of nutrients by performing chelating agent function. It is made only from the plants' compost, naturally matured and specially fermented for several years.

SANASOIL™

Advice - Before sowing, seeds are sprayed with water based SANASOIL solution. Before that, seeds are developed with ozonated water based on quantities refined by specialists for each specific species of seeds.
